Cautionary note

Certain statements in this presentation regarding the business of Barry Callebaut are of a forward-looking nature and are therefore based on management’s current assumptions about future developments. Such forward-looking statements are intended to be identified by words such as “believe,” “estimate,” “intend,” “may,” “will,” “expect,” and “project” and similar expressions as they relate to the company. Forward-looking statements involve certain risks and uncertainties because they relate to future events.

Actual results may vary materially from those targeted, expected or projected due to several factors. The factors that may affect Barry Callebaut’s future financial results are discussed in the Letter to Investors as well as in the Annual Report 2016/17. Such factors are, among others, general economic conditions, foreign exchange fluctuations, competitive product and pricing pressures as well as changes in tax regimes and regulatory developments. The reader is cautioned to not unduly rely on these forward-looking statements that are accurate only as of today, Nov 8, 2017. Barry Callebaut does not undertake to publish any update or revision of any forward-looking statements.

Cocoa processing profitability

Combined ratio remains favorable, driven by butter demand and lower cocoa bean prices

European combined ratio - 6 months forward ratio

Combined ratio remains favorable, driven by butter demand and lower cocoa bean prices. The combined ratio, which represents the ratio between input costs (price of cocoa beans) and combined output prices (price of cocoa butter and powder), has remained favorable over the past few years, with a significant drop in cocoa bean prices contributing to this trend. Over the past few months, there has been a mild recovery in cocoa bean prices, which has driven a slight increase in the combined ratio. The combined ratio for FY 2016/17 is 3.6, indicating a healthy profitability for cocoa processors.
