Cocoa Combined Ratio development

European combined ratio - 6 month forward ratio

Combined ratio gives broad indication...

Shows general high level industry direction, assuming many variables are fixed.

However...

Many variables are not fixed e.g.

- Terminal market: outright levels, arbitrage (London vs. New York), market structure.
- Differentials: structure and origin differences, Living Income Differential (LID) in Côte d’Ivoire and Ghana.
- Forward pricing structure: butter and powder.
- Customer forward coverage: butter and powder.

For cocoa processors, profitability depends on the ratio between input costs (price of cocoa beans) and combined output prices (price of cocoa butter and powder).
Operating profit (EBIT) up +3.8% against prior-year recurring thanks to resilient Gross profit and strict cost management
Net profit +6.9% compared to prior-year recurring thanks to solid profitability and lower financing cost and taxes

Effective Tax Rate:
- HY 20/21: 17.4%
- HY 19/20: 19.2%¹
